

Rated voltages: **6; 12; 24; 48V AC**  
Maximum current: **16A**

The SELV socket-outlets are 16A 2-pole safety extra-low voltage (up to 50 V) socket-outlets for use on appliances and devices. The socket outlets are equipped with a groove coding to prevent the use of a plug not complying with the socket voltage.

The SELV plugs are 16A 2-pole plugs for use with safety extra-low voltage socket-outlets. The plugs are equipped with a ribbed coding to prevent being used with socket-outlet not complying with the plug's voltage. Special construction of the cable fastening element (two positions dependent of cable cross-section) ensure appropriate, safe fastening of the wires in the plug. Cross-section of the conductors 4 mm<sup>2</sup> (single wire) or 2.5 mm<sup>2</sup> (when sockets are connected in parallel).

Socket-outlets and plugs are intended for use with portable, encased transformers PFS, power supplies and electrical systems on boats and camping cars. Protection grade IP44. Manufactured in compliance with EN60884-2-4.
