

Smart regulators  
with MODBUS protocole

# RegiSoft system

Easy-to-use, versatile system  
for controlling set of regulators

RegiSoft system is based on AREX/A fan speed regulators with MODBUS protocol and dedicated software for PC computers

RegiSoft makes it possible to control system containing of up to 247 regulators thanks to a dedicated software for PC computer, as well as on tablets and smartphones when VPN standard is used. RegiSoft software is easy to install and intuitive to use, not to mention attractive to look at. RegiSoft is also operable offline and offers the possibility to store the setting in local database

RS-485 signal-based communication between software and regulators is made with just two wires which reduces the cost of implementation and facilitates the installation. It is worth mentioning that the maximum wire length is up to 1200 meters which makes the RegiSoft system very useful on large areas, for example in production halls.

## Advantages of RegiSoft system

- ⚙ Temperature sensor in every AREX/A regulator assures money savings and optimal temperature
- ⚙ Easy to install and configure
- ⚙ Intuitive to use
- ⚙ Fresh, modern design
- ⚙ Possibility of operating in offline mode
- ⚙ MODBUS-based communication for versatile use
- ⚙ Possibility to store settings in local database
- ⚙ Up to 247 regulators in one system
- ⚙ Multiple language versions
