# Electronic fan speed controllers with remote control 

C $\quad$ 回

Output current: 5; 7; 10A
Rated voltage PRI: $\mathbf{2 3 0 V} \mathbf{5 0} / \mathbf{6 0 H z}$ Range of output voltage: $105-230 \mathrm{~V}(+-5 \%)$

Control type: 0-10V DC, 0-20mA, MODBUS

Microprocessor-based, thyristor stepless speed regulators for fans with a single-phase AC motor, where the control takes place using the phase method. They enable stepless distance regulation of fans by means of external signals. Built-in KickStart function that gives full supply voltage for the first 10 seconds after switching on, guarantees correct and safe start-up. The power supply for the control part is separated with 4 kV insulation.

Controllers type AREX - controlled by 0-10VDC signal Controllers type AREX/I - controlled by $0-20 \mathrm{~mA}$ signal Controllers type AREX/A - automatically controlled by communication using the MODBUS protocol.

AREX/A models can be connected to HMI panels, PLCs or a PC, which allows the creation of complex HVAC systems or integration with BMS systems. These controllers can operate in an autonomous mode or in a direct mode (information about the output voltage is sent to the regulator).
